

Changes to be addressed:

1. Remove address, phone number, euid and race from everywhere. They are not needed.
2. Remove all mandatory fields except student ID.
3. In form, move the country field next to the zip code.
4. Delete SAT score. It is not required.
5. For GRE scores, make fields next to GREQ, GREA and GREV to enter each of their percentages. They can be named GREQ%, GREA% and GREV%
6. Rename TOEFL field to ELP.
7. Remove research professor and milestone from add student.
8. Add milestone page just like notes page and employment history page. (Just add a button and leave the page blank for now. They will tell us what to add in milestone page in next meeting)
9. Do not show the student data until it is searched or filtered. Hide the data on the landing page.
10. Change the name of list view to postcard view.
11. Delete edit button and add it inside profile.
12. In employment history, add a \$ sign in front of pay level.
13. Report needs to be improved. (We will discuss this in detail over phone)
14. While adding students, adding employment history is not necessary. We can bypass that page. It will be entered later after the student gets a job.
15. In profile form, move gender up and place it after name.
16. While adding students, they could have more than one education history. Add a button in that page to add more education history before proceeding to the next page.
17. In table view, remove all the other buttons except the profile button. These are the required fields in table view: student ID, name, email, starting semester, advisor, program enrolled and profile button.
